

## Assignment 6

### Assignment:

Create a simple to-do list with Flask. The to-do list should allow users to enter tasks in the web and the same will be stored in a dictionary in the backend.

### Requirements:

- The to-do list should be a web application that is built with Flask.
- The to-do list should have a form where users can enter tasks.
- The tasks should be stored in a dictionary in the backend.
- The to-do list should allow users to view, edit, and delete tasks.

### Deliverables:

- The source code for the to-do list application.
